Nguyen Van Qua, District 12, Ho Chi Minh City, Vietnam https://github.com/HoaiVu2005

OBJECTIVE

Final-year Management Information Systems student seeking a Web Developer Internship to gain practical experience in a professional software development environment. Experienced in building web applications using ReactJS, TypeScript, Node.js, ExpressJS, and MongoDB through personal projects. Also have hands-on experience working with Big Data technologies and Odoo ERP development through academic projects. Eager to learn new technologies, solve real-world problems, collaborate with team members, and further develop technical skills through hands-on experience.

EDUCATION

University of Transport Ho Chi Minh City – UTH 2023 - 2027

Management Information System

GPA: 3.39

SKILLS

Frontend	HTML5, CSS3, JavaScript (ES6+), TypeScript, ReactJS, React Router DOM, Tailwind CSS v4, Material UI (MUI), shadcn/ui, Redux Toolkit, Zustand, DnD Kit
Backend	Node.js, ExpressJS, REST API, Socket.IO
Database & Authentication	MongoDB, Mongoose, JWT, Refresh Token, HTTP-only Cookies
Tools & Services	Git, GitHub, VS Code, Postman, Cloudinary (CDN), Vercel, Render
Soft Skills	Communication skills, Problem-solving, Calm under pressure, Analytical and critical thinking, Deadline management

PROJECTS

TRELLO CLONE - TASK MANAGEMENT APPLICATION 4/2026 - 8/2026

Fullstack Developer

Description: Developed a web-based task and project management application inspired by Trello, empowering users to visually organize tasks using the Kanban methodology.

Tech Stack: React, Vite, MUI, Redux Toolkit, dnd-kit | Node.js, Express, MongoDB, JWT | Socket.IO, Cloudinary, Resend

Key Features & Achievements:

- Built complex drag-and-drop using dnd-kit with auto-updating card/column positions
- Integrated Socket.IO for real-time synchronization across concurrent users
- Centralized state management with Redux Toolkit and Light/Dark mode
- Implemented secure JWT authentication with bcrypt encryption
- Designed optimized MongoDB schema for nested data (Board → Column → Card)

MOCHI CHAT - REAL-TIME MESSAGING APPLICATION 8/2026 - 9/2026

Fullstack Developer

Description: A scalable full-stack real-time chat application supporting 1-on-1 and group messaging, friend management, and live presence tracking.

Tech Stack: React 19, TypeScript, TailwindCSS v4, Zustand | Node.js, Express, Socket.IO | MongoDB, Mongoose, JWT, Cloudinary

Key Features & Achievements:

- Built real-time messaging with Socket.IO for instant delivery, presence tracking, and read receipts
- Implemented Dual-Token JWT authentication with HTTP-only cookies for secure multi-device sessions
- Optimized performance with cursor-based pagination and infinite scroll for large message history
- Managed global state with Zustand and standardized API error handling via Axios interceptors
